BirdFrame

A Mac app · getbirdframe.com

Stop cropping bird photos by hand.

Crop thousands in one go, at full resolution.

BirdFrame finds every bird in a whole Apple Photos album or folder, even small, distant and half-hidden ones, and crops each one from the full-size original.

Two birds, one half-hidden. Both found and cropped from the original: nothing downscaled, nothing generated.

1. **Choose an album or folder**
   Apple Photos, or JPEG, HEIC and RAW files.
2. **Pick Tight, Balanced or Wide**
   BirdFrame finds every bird and frames it.
3. **Crop & Apply or Export Crops**
   Reversible edits in Photos, or new JPEGs.

Works inside Apple Photos
Reversible edits: Revert to Original any time.

RAW folders
CR2, CR3, NEF, ARW, ORF, RAF, RW2 and DNG.

Moments, new in 1.3
One card per burst, showing its clearest bird.

Everything stays on your Mac
Nothing is uploaded, nothing is generated.

Free for 50 photos per run · $29.99 once · Mac, macOS 15+
